Title:	**CORPORATE ENVIRONMENTAL POLICY**	

1. Policy Statement

Purolator takes a strategic and inclusive approach to environmental sustainability that focuses on empowering our people, delivering for the planet, and helping local communities. We are committed to maintaining strong environmental standards and conducting our business in an environmentally responsible manner. We acknowledge our responsibility to manage the environmental impacts associated with our operations.

The Corporate Environmental Policy ("Policy") sets out environmental principles and requirements that Purolator Inc. ("Purolator", "our", "its") will adhere to in delivering our commitments. Additional environmental principles and requirements are defined in Purolator's Code of Business Conduct and Ethics, Responsible Sourcing Standard, and other company policies. Implementation of this Policy is an important management objective and is the responsibility of all Purolator employees.

2. Scope

This Policy applies to all Purolator operations and employees across all operational jurisdictions. When engaging with our partners (customers and suppliers) in our value chain, we also encourage them apply the same commitments set out in this Policy.

3. Policy Oversight

Purolator's Board of Directors, through its Environmental, Social and Governance ("ESG") Committee, provides oversight and guidance on Purolator's environmental sustainability strategy and performance. The President & Chief Executive Officer is the Executive Owner of this Policy and has delegated it maintenance to the Vice President, Corporate Sustainability.

This Policy is reviewed regularly. It is communicated to Purolator's Board and internal stakeholders and is publicly available through Purolator's annual Sustainability Report and webpage.

4. Principles and Requirements

The following principles and requirements help guide environmental initiatives at Purolator:

i. Minimize Environmental Impacts and Prioritize Climate Resilience

Proactively work to minimize Purolator's environmental impact through strategic implementation of initiatives that, among other things, conserve energy and natural resources, lower greenhouse gas ("GHG") emissions, and reduce waste. This includes investing in alternative-fuel vehicles, energy-efficient and climate resilient buildings, recycling and reuse solutions, and network optimization.

Continue to work toward achieving our commitment to reach science-based, net-zero GHG emissions across our value chain by 2050 as approved by the Science Based Targets initiative.

ii. Compliance

Meet or exceed compliance with all applicable environmental laws and regulations. Establish and maintain environmental standards, procedures, and management controls in line with company polices. Perform ongoing environmental reviews of our operations to identify environmental risks, implement corrective actions, and ensure continuous improvement.

iii. Reporting and Transparency

Regularly monitor and report on environmental sustainability initiatives and performance through Purolator's annual Sustainability Report, webpage, external environmental disclosures, and internal and external communications. Continue to monitor and develop metrics to improve transparency and reporting, driving continuous improvement. Demonstrate credibility through third-party verification of disclosures where appropriate. Keep Purolator's ESG Committee regularly informed of updates to environmental strategy and progress towards targets.

iv. Stakeholder Engagement

Proactively seek and consider the views of all stakeholders. Provide tools, education, and opportunities for involvement that empower Purolator's employees to act in an environmentally responsible manner and contribute towards Purolator's environmental sustainability goals and objectives.

v. Sustainable Procurement

Include environmental considerations and requirements in Purolator's sourcing and procurement activities, as outlined in Purolator's Responsible Sourcing Standard. Assess the lifecycle of products and services to determine their environmental impacts. Seek to partner with suppliers that demonstrate alignment with Purolator's environmental sustainability goals and objectives and that can provide reporting on their initiatives and performance. Collaborate with existing suppliers to help them identify and adopt goods and services that reduce their environmental impacts.

vi. Low-Carbon Transportation

Partner with transportation suppliers who are reducing the GHG emissions intensity of their services through operational efficiencies such as fuel-efficient driving and route optimization, increased use of alternative-fuel vehicles, renewable fuels, and other innovative lower-carbon solutions.

vii. Sustainable Forestry and Packaging

Source and use packaging and paper products that are made from materials that originate from responsibly managed forests and are certified to internationally recognized sustainable forestry standards, with a preference for Forest Stewardship Council ("FSC") certification. Maximize the use of recycled content where applicable. Prioritize reducing and reusing paper and packaging products through emerging solutions and circular economy innovations.

viii. Service and Product Sustainability

Prioritize suppliers that have sustainable supply chains, including sourcing locally. Seek out suppliers that offer take-back programs and products that are designed to be durable, repairable, and reusable.
